7ft (2.1m) for  
operation

Color: Metallic

Mounts and optional  
accessories are sold  
separately.

# MP1 SuperStick Portable Antenna HF-VHF

The MP1 SuperStick is the #1 HF Portable Vertical Antenna in the world. So many operators choose the MP1 because it is so reliable, powerful, compact, and versatile. It covers the entire range of ham bands, all shortwave frequencies, marine, CAP, MARS, and everything in between. Analyzers or tuners are not needed. Simply adjust the SuperSlider to your desired operating frequency and start transmitting. SuperStick packs down to fit in your go bag, then instantly expands up to full size when you need it for EmComm deployments, DXpeditions, or temporary base installations. Super Antenna's precision engineered construction and high Q coil makes it the perfect companion for QRP or higher output portable transceivers for maximum radiated power.

The tubular slider with military-grade nickel beryllium slip connections provides clean and constant tuning, without resorting to the clumsy fly wires, gimmick clips, or unreliable banana jacks found in low tech competitors' designs. Get the MP1 SuperStick, a big signal in a small package.

- Telescopic Whip with Standard 3/8"-24
- Precision Aluminum SuperSlider
- Nickel Beryllium Weatherproof Connections
- SuperSlider Lock Provides Stable Tuning
- High Q SuperCoil for Maximum Efficiency
- Durable Polymer SuperCoil Form
- Two Extension Rods for Height Flexibility
- All Modular Parts Standard 3/8"-24 Fittings
- Optional Coils for 80m and 60m Bands
