The Dual-Band Wi-Fi Omni directional antenna, developed by Poynting Antennas, can connect to any Wi-Fi access point whether it is older Wi-Fi technology or new dual band Wi-Fi technology. These antennas can resolve channel saturation and provide the ultimate in Wi-Fi performance and flexibility. This means the antenna can be used for point to point links where there is abundance of RF noise and also cluttered environments.

The antenna operates in two frequency bands 2.4 GHz and 5 GHz, offering excellent utilization of the radio spectrum. This Antenna has a maximum 6dBi gain at 2.4GHz band and 7.5dBi gain at the 5GHz band, which offers the best performance with reliable connections. The housing is made of ABS which is high impact resistant plastic and is also resistant to acids and other chemicals that may occur in industrial plants. The antenna has a N-Type female connector at its base which can be terminated to a cable of the desired type and length.

**Application areas**

- Small business
- Building sites
- Factories
- Open mine sites
- Production facilities
- M2M
- Wi-Fi/WiMax/LTE 3.3GHz - 3.8GHz applications

Frequency bands

The OMNI-296 works on the 2400 - 2500 MHz and 5000 - 5800 MHz bands

OMNI-296:

Antenna Performance Plots

**Voltage Standing Wave Ratio (VSWR)**

VSWR is a measure of how efficiently radio-frequency power is transmitted from a power source, through a transmission line, into a load. In an ideal system, 100% of the energy is transmitted which corresponds to a VSWR of 1:1. The OMNI-296 delivers superior performance across all bands with a VSWR of 2.5:1 or better.

*VSWR measured with 1m low loss cable

**Gain**

7.5 dBi is the peak gain across all bands from 2.4 - 6 GHz

Gain @ 2400 - 2500 MHz: 6 dBi
Gain @ 5000 - 6000 MHz: 7.5 dBi

*Antenna gain measured with polarisation aligned standard antenna
