

radiosport RS20S headset

Read Me First!

Stereo/Dual-Watch/Dual-Receive Listen-Only headset in Carbon Fiber finish

Congratulations on acquisition of your new *radiosport* headset.

Every effort has been made to build simply the best headsets we can for Amateur Radio. In order to enjoy your new headset to the fullest we would like to cover some of the adjustments and features of your radiosport headset.

Fit the headset to your head...

The headset is adjustable and is originally set for a small head to provide a comfortable fit for even young teenager Amateur Radio Operator or Shortwave Listener. To have the most comfortable fit you may want to spread the headband by pulling the headphone ear cups outward to stretch the band's loop. Stretch it just enough so there is not too much pressure on the sides of your head, but enough to seal the ear cushions around your ears so you enjoy the benefits of noise reduction and so that they want slip off during normal head movement. If you go too far, no problem, simply push the headphone ear cups back together slipping one cup past the other if needed to narrow the spread.

The stainless steel band is very sturdy and the Thumb-Adjust nuts that retain the slider can be loosened and tightened to position the cups over your ears.

How you wear them makes the difference in comfort...

Always set the headband over the center of your ears or slightly forward for the best balance and comfort. If you wear the headset too far back you will feel weight placed on your neck. Proper balance means not feeling the headset weight. If you get used to this simple adjustment when putting on your headset you will find them very light and comfortable.

deluxe "dream" edition...

The RS20S now comes standard with all of our comfort options including Gel Ear Cushions, Cloth Ear Covers and our new Soft Pillow-Top headband cover for the most comfortable fit. Our Gel Ear Cushions provide the maximum in comfort even for operators wearing glasses. The Cloth Covers reduce perspiration in hot humid climates or when wearing for weekend long contests. The new Soft Pillow-Top headband cover helps distribute the headset weight over a much larger area. (Outdoors in humid summer climates try our cool Foam-filled Ear Cushions – perfect for Field Day!)

Radio Interface...

The RS20S is provided with a rugged detachable cord terminated in a 3.5mm Stereo headphone plug. This allows the headset to be used with small QRP radios as well as other mobile devices. For use with typical HF radios a quality 3.5mm to 1/4" headphone adapter is provided. Most HF radios since the early 1990s support stereo headsets and indeed have stereo audio amplifiers inside even though they have only one receiver.
